Thailand Accordion Fold

During the sinking of the Sunda Plate, there is pressure from the side as well as a press down on the Sunda Plate, the tongue of the Eurasian Plate holding Indonesia. Per the Zetas, the flooding in Thailand on October 30, 2010 and the rise of a new island near Bali on November 3, 2010 were related. As outlined in [Issue 211](#) of this newsletter, they were both part of accordion folding as the Sunda Plate was compressed from the side.

IMAGE: [Thailand Flooding](#)

IMAGE: [Bali Island](#)

ZetaTalk [Explanation](#) 11/13/2010: *Note the mountainous regions to the east and west of the valley in central Thailand. We have mentioned that when a plate tilts, rising one side and sinking on the other, that this plate may bend where the plate is thin. It is also true that thin places on a plate can give rise to buckling when that plate is under compression, being squeezed. The tongue holding Indonesia is certainly under such a squeeze. As the tongue is pushed together, the eastern portion pushed toward the west, the valley in central Thailand is buckling, being pushed down. Simultaneously, a new seemingly volcanic island appeared between eastern Java and Bali, where the tongue is under pressure as it is being pushed down under the curve of the Indo-Australian Plate. Where this is causing extensive volcanic activity in Sumatra and Java, it is also finding weak places in the plate holding Indonesia, which can buckle in such a manner as to rise.*

Now horrific flooding in Thailand is again in the news, including CNN and the BBC, breaking the cover-up over the sinking on the Sunda Plate. The flooding in this most recent accordion fold is occurring *inland*, and ascribed to rain though the rainfall statistics do not bear this out, nor do on-the-ground reports. Rivers that cannot drain are accumulating, and creating new lakes in areas that are dropping below the point where the river drain to the sea. Then as the Bangkok area itself sinks further, these trapped waters suddenly find they have an outlet again, in the direction of Bangkok. If the flooding were due to rains from recent tropical storms, then why is

the more vulnerable coastline of Viet Nam not flooded? The areas affected by flooding are in the Thailand accordion fold and in Luzon, the north Philippines island, which is on the Philippine Plate and affected by the folding of this plate (7 of 10 scenario 3).

IMAGE: [Selective Flooding](#)

IMAGE: [7 of 10 Sequence](#)

Where the local news frankly alludes to *sinking*, stating the Ayutthaya temple region inland from Bangkok has a "sea-level rise", CNN and the BBC stuck to the cover-up story, alluding only to rain or "spring tides". The CNN photo gallery only showed distressed people, *not* a map of the selective flooding which might raise eyebrows.

Thailand: Four Large Industrial Areas Flooded

October 17, 2011

<http://tuoitre.vn/The-gioi/460834/Thai-Lan-4-khu-cong-nghiep-lon-bi-ngap.html>

Ayutthaya province and the Chao Phraya River Basin was submerged by flood waters in the sea-level rise and more and overflow their banks.

Thai Flooding Threatens Capital as Residents Seek Refuge

October 20, 2011

http://www.cnn.com/2011/10/20/world/asia/thailand-flood/index.html?hpt=hp_t2

In the ancient city of Ayutthaya, one of the worst-hit areas, officials said the water was starting to flow toward the rivers. In Bangkok, crews scrambled to widen canals and strengthen flood barriers amid fears that weekend rains and spring high tides would overwhelm parts of the city.

Thailand Floods: Ancient Capital Ayutthaya is 'Swamped'

October 19, 2011

<http://www.bbc.co.uk/news/world-south-asia-15379479>

The authorities in Thailand are struggling to contain the impact of the country's worst flooding in decades. The army and volunteers are working to shore up flood defenses in Bangkok but there are fears barriers will not hold.

ZetaTalk [Comment](#) 10/22/2011: *The sinking of the Sunda Plate is not yet complete, despite the flooding in Thailand which has the residents of Bangkok almost hysterical. We described an accordion effect on the Sunda Plate, where it was pressed from the side as*

well as pushed down under the curve at Sumatra and Java. Even before Java began sinking, Thailand was in an accordion fold that lost elevation, experiencing worsening floods, while a [new island near Bali](#) popped up. This region near Bangkok appears to be reaching the 40 foot elevation drop we predicted, but this is deceptive as other parts of the Sunda Plate have not yet completed.

Luzon, the northern island of the Philippines, [seemed exempt](#) from flooding in January, 2011, though by [July 10, 2011](#) had started to participate in the sinking the rest of the Philippines had been experiencing. Suddenly, by [September 4, 2011](#) Luzon was under water, and [this is worsening](#). We have mentioned that though Luzon appears to be on the Philippine Plate, this is a land mass attached to the Philippines on the Sunda Plate because underlying rock strata hold it to the Sunda Plate. It will not sink while the Philippine Plate folds.

Caribbean Quash

The S American roll (7 of 10 scenario 4) is proceeding apace also. A massive ravine suddenly appeared in El Salvador, which has been ascribed to, ahem, a little erosion from rain. If you believe that one, I have a bridge I'd like to sell you.

IMAGE: [El Salvador Ravine](#)

Geologists Verify Gully Formed in Comasagua
October 20, 2011

<http://mediacenter.laprensagrafica.com/galerias/la-prensa-grafica/noticias/>

The ravine appeared in last Tuesday due to erosion of the land after nine days of incessant rains. The depth of the ravine about 100 meters and length 500 meters. People who live near the place where the earth opened, were immediately evacuated for cause the danger of erosion of land. The formation of this ravine was presumably due to saturation of water.

In nearby Honduras there has been continual collapse, recently ascribed to 5 days of rain. Does this look like something rain alone would do? Or is this crunch and crumble?

IMAGE: [Honduras Crumble](#)

Twelve Killed by Rains in Honduras
October 17, 2011

<http://www.latribuna.hn/2011/10/16/doce-muertos-por-las-lluvias-en-honduras/>

In just five days of heavy rain, about 12 people have died and more than 13,600 people have been affected in Honduras, a product of low pressure system that affects the Honduran territory.

On the opposite side of the El Salvador ravine, in Guatemala where the border of the Caribbean Plate runs, there was also horrific collapse, also ascribed to rain. But again, does this look like rainfall damage? The Caribbean Plate includes Central America, and as outlined in [Issue 261](#) of this newsletter on October 2, 2011, this region of Guatemala is in the crosshairs. Panama, at the point where it touches the Caribbean Plate border at the border with Colombia, likewise had horrific flooding, but for Panama, this is *sinking*, the Caribbean Plate being pushed down.

Government Declares State of Public Calamity Throughout the Country
October 16, 2011

<http://prensalibre.com/noticias/comunitario/Gobierno-decreta>

The National Institute of Seismology, Volcanology, Meteorology and Hydrology (Insivumeh) said in a statement Sunday that the rains increased after Saturday's nationwide have been caused by a low pressure system located off the coast of Belize, in the Caribbean.

Flooding in Darien Region of Panama
October 16, 2011

<http://www.thepanamablog.com/flooding-in-darien-region-of-panama/>

These effects are the result of 72 hours of heavy rains that occur in the Darien area, which have caused the rise in river levels, such as Chad.

ZetaTalk [Prediction 6/5/2010](#): *Panama and Costa Rica will be crushed during the 7 of 10 by the grinding movement of the hump as the great S American Plate grinds over it. Guatemala, El Salvador, Nicaragua, and Honduras hardly fare better, though the hump of S America does not grind over them.*

As proof that the flooding in Panama, ostensibly from rain, is due to *sinking* are the reports during this same period from Trinidad and Tobago. These are islands *specifically* mentioned by the Zetas to sink during the S American roll. The tropical storms came through and dumped on Trinidad and Tobago, but not the coastline of Venezuela or Colombia?

IMAGE: [Island Flooding](#)

Heavy Rains Lead to Flooding

October 16, 2011

<http://www.newsday.co.tt/news/0,149024.html>

Heavy, persistent rainfall yesterday triggered flooding in several parts of Trinidad and Tobago. The Met Office said, however, that the country was not under any tropical storm threat, warning or watch.

Flooding Reported as Heavy Rains Pelt Island

October 16, 2011

<http://jamaica-gleaner.com/gleaner/20111016/lead/lead5.html>

Heavy rains lashing the island for the past two days have left several areas flooded.

Note that where flooding is reported, as well as where horrific crumbling of the landscape is reported, it is *on the Caribbean Plate!* Not the islands of Aruba, Bonaire, and Curacao. These islands are on the hump of the S American Plate and thus not affected by the sinking of the Caribbean Plate, as are Trinidad and Tobago and the point where Panama attaches to Colombia. Somehow the rain simply avoids Aruba, Bonaire, and Curacao as well as Venezuela and Colombia while on a straight line toward the Darien Region of Panama?

IMAGE: [Plate Borders](#)

ZetaTalk [Prediction](#) 1/15/2011: *Aruba, Bonaire, and Curacao ride on the hump, and thus will survive. Islands just to the north of S America will be affected the most such that Barbados to Tobago may sink entirely except for the highest points, losing several hundred feet in elevation, and Trinidad will be torn apart in addition to sinking as it rides on the plate border.*

Gadhafi Gone

Despite his [200 billion in wealth](#), Gadhafi was dragged out of a culvert, beaten, paraded about on the hood of a car, and finally shot in the head deliberately by one of the freedom fighters. The man who had ruled Libya with an iron fist, killing tens of thousands of his citizens to be buried in mass graves, expected mercy from those he had brutalized. The man who gave orders to his military to attack Benghazi and basically kill every male between the ages of 5 and 85 for revenge for their uprising, expected to be treated kindly at his capture.

Gaddafi: Death of an Era, Dawn of an Era

October 21, 2011

<http://english.aljazeera.net/indepth/opinion/2011/10/2011102151443683876.html>

A people so thoroughly cowed and intimidated in those years as the Libyans. The life of a Libyan official or anyone in a position to harm the interests of the regime was life in a snake-pit. Brother could not trust brother. In any group of three, at least one would have to be assumed by the others to be a regime informant.

Muammar Gaddafi's 'Trophy' Body on Show in Misrata Meat Store

October 21, 2011

<http://www.guardian.co.uk/world/2011/oct/21/muammar-gaddafi-body>

Gruesome mobile phone footage records the minutes after Gaddafi's capture, when his convoy came under Nato and rebel attack. He is dragged out of a tunnel where he had been hiding. Blood is already pouring out of a wound on the left side of his head. A group of fighters then frogmarch him towards a pick-up truck. There are shouts of "God is great" and the rattle of gunfire. At one point Gaddafi keels over; a fighter kicks him and scuffs dirt over his bloodstained clothing. The rebels prop Gaddafi back on his feet and propel him onwards. Gaddafi is clearly dazed and wounded - but is alive, conscious, and pleading feebly with his captors. Fighters at the scene said that he was injured in the shoulder and leg when he was found. Fresh blood is also flowing from a head injury.

Was the death of Gadhafi a staged affair, faked, politically convenient, as has been done in the past as the Bush administration claimed re Saddam Hussein and his sons and as was suspected with the death of Bin Laden? Per the Zetas, this is the real Gadhafi.

IMAGE: [Saddam Fake](#)

IMAGE: [Son Fake](#)

ZetaTalk [Analysis 10/22/2011](#): *The death of Gadhafi was the culmination of a hunt by a large majority of the populace of Libya, and not faked. Gadhafi, by his own testament, did not wish to leave Libya. He and his sons feared being turned over to prosecutors if they sought asylum in other countries. Even Venezuela looked shaky, given the current health of Hugo Chavez. In the heat of battle, finding an exact double of Gadhafi is not only unlikely, it is nearly impossible. The capture was recorded on a cell phone video. This was not a staged and well controlled scene, as was the supposed capture of Saddam and his sons. Saddam Hussein and his sons were clearly doubles, as an examination of their facial structure and features showed. Bin Laden's death, clearly a western op, could have been faked for the political benefit, but was not, as we stated. Where most of Bin Laden's videos and pronouncements were faked by the CIA,*

there was always the danger that the real Bin Laden would come forward, and thus his capture was never previously claimed.

Does this grisly death at the hands of angry citizens who lived under Gadhafi's brutality for decades have a moral?

ZetaTalk [Prediction](#) 2/8/2003: *The elite presume the status quo continuing. They presume the public being dumb until the end. They presume their lackeys being good employees until the end. They presume their funds, their wealth, being worth what it is today until the end. They presume industry plodding along so that supplies will be available until the end, commerce continuing. They presume that repairs in the supply line, in communication lines, will be forthcoming and not permanently, disruptively, devastating. They are wrong on all counts.*
